... your eye in the sky

FY - COMPOSITES

Dear Sir/Madam,

Def Expo 2010 was a huge success for ATL as it provided us an opportunity to welcome you and hundreds of other key guests at our stand. At Defexpo 2010, ATL was in good company of world renowned manufacturers of defence and security products, and Anjani's participation was noticed and appreciated by all. At display was Anjani's capability and vision- from Waterjet Cutting Systems to Amphibian Planes to Fixed Wing and Rotary Wing UAVs to Lightest and Strongest Body Armor Solutions.

"Bringing You The Best" our company slogan, found a clear and loud expression in the display at the Defexpo. ATL's international reach and repute was visible through the alliances we have formed over the last year- our partnership with technology leaders – BAE Systems of USA, IIAAT of Russia, Schiebel of Austria, Microdrones of Germany and FY Composites of Finland. The products we are bringing to India through these partnerships are world class.

BAE Systems is bringing Tensylon - a high performance polyethylene ballistic material, to India with Anjani. Anjani will be using Tensylon to make the protective products stronger and lighter for the Indian defence and security forces. Processing Tensylon in India is a critical first step for our two strong manufacturing companies.

IIAAT a premier research institution in Aerospace technologies, controlled by Govt. of Russia, similar to the DRDO of India, has partnered with Anjani to produce a 4 seater Amphibian Plane and fixed wing UAVs. The Amphibian plane, capable of landing and taking off from water, found keen interest from Coast Guards, Navy, and many other institutions for a variety of applications. It will be known as SeaBird in India.

SCHIEBEL CamCopter, a medium size (UAV), provides unrestricted surveillance against all threats. A watchful eye to protect against internal & external threats, Camcopter, received great response during the exhibition.

MICRODRONE (Mini UAV,) a watch tower 300 meter high in the sky, will help security agencies keep an eye on areas on their interest to help them make sure no untoward incident occurs under their watch. It is a multi-purpose device which can travel on a pre-set path or can be manually controlled in real time according the needs of the forces

Rapid Armor Shelter System (RASS) from FY-COMPOSITES is an engineering achievement built on patented technology of FY Composites. Large protective structures can be erected within minutes to protect our forces from ballistic threats. RASS is modular and can be erected at any location with ease.

Govt. of India provided a prestigious platform to indigenous manufacturers through the Defexpo to help them write their own destiny, and we at Anjani took full advantage of the opportunity. We are immensely grateful to our Government for providing this opportunity.

I also take this opportunity to thank you for your continued support to Anjani.

With warm regards

R. K. Gupta
(Managing Director)

Bringing you the best...
